

# Community Health Status Indicators

## CHSI 2009

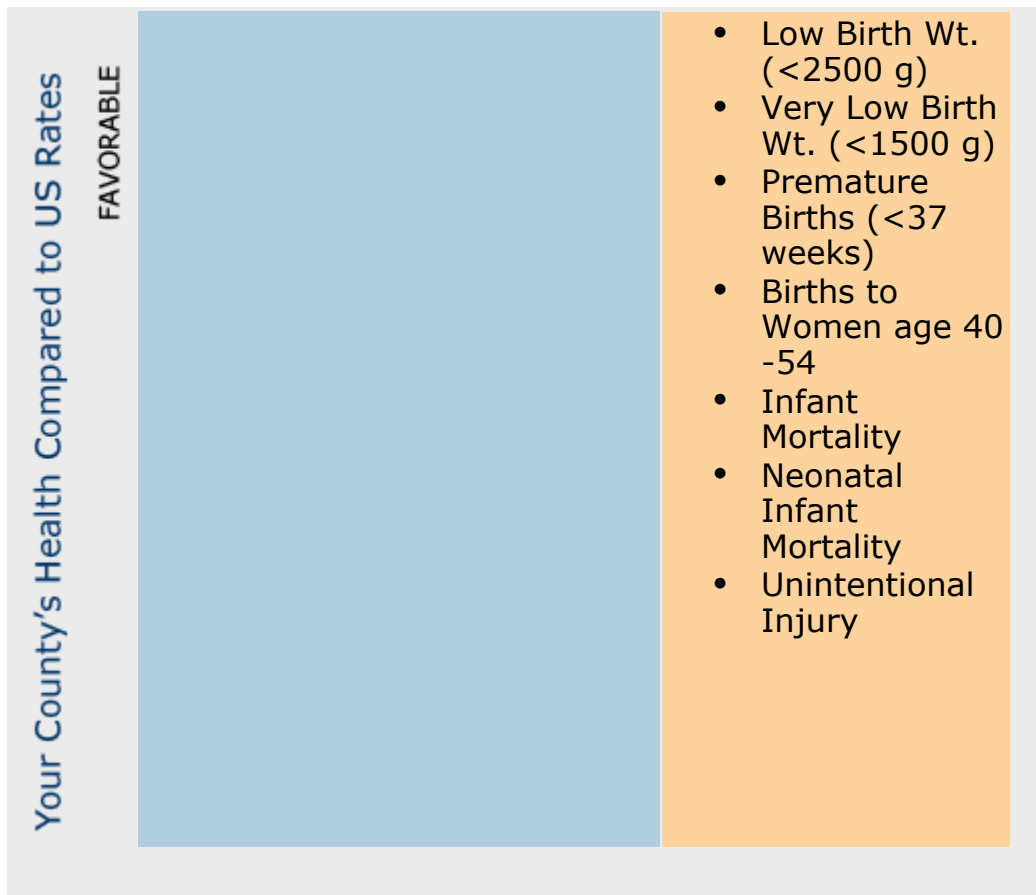

*Our Mission: Provide Information for Improving Community Health*

### Relative Health Importance: Miami County, IN

 Indicates a status favorable to peer county median value

 Indicates that a closer look and perhaps reduction to the percent or rate may be needed. Blank indicates no comparison.

Your Health Status Compared to Peers		
	UNFAVORABLE	FAVORABLE
UNFAVORABLE	 <ul style="list-style-type: none"><li>• Births to Women under 18</li><li>• Births to Unmarried Women</li><li>• White non Hispanic Infant Mortality</li><li>• Post-neonatal Infant Mortality</li><li>• Breast Cancer (Female)</li><li>• Colon Cancer</li><li>• Coronary Heart Disease</li><li>• Lung Cancer</li><li>• Suicide</li></ul>	<ul style="list-style-type: none"><li>• No Care in First Trimester</li><li>• Motor Vehicle Injuries</li><li>• Stroke</li></ul>
		

The Relative Health Importance table creates four categories of relative concern by simply comparing a county to its peers and to the U.S.

A county's indicators in the Unfavorable/Unfavorable Quadrant (🔍) are higher than the U.S. and its peers and may warrant more attention. Conversely, indicators in the Favorable/Favorable Quadrant (🍏) of the table compare favorably to both peers and the U.S. The other boxes represent intermediate levels of health where a county's rate is higher than either its peers or the U.S., but not both.
